ENGINEERS AUSTRALIA'S GRADUATE PROGRAM

Delivered by Engineering
Education Australia

Best practice blended learning, customised to your business needs.

Investing in a structured learning and development program grows a graduate's potential to become a future leader.

Engineers Australia's Graduate Program provides opportunity for an early return on investment through building graduate capability to drive business results.

Supporting graduates through the Program is evidence that your organisation is focused on accelerating value delivery for clients.

Engineers Australia's Graduate Program is designed to be engaging and flexible. Industry relevant content has been developed in consultation with engineering organisations.

Key outcomes of the Program include growing valuable engineering graduates into confident decision makers on their way to becoming Chartered ready.

Upon successful completion, participants can apply for credit towards a Graduate Certificate from Deakin University with a pathway to a Master's degree.

FEATURES & BENEFITS

Chartered

- Internationally recognised competencies underpin the Program, which is delivered through EngLearn; our interactive Learning Management System
- Creates a culture of 'Chartership' through analysis and detailed understanding of the competencies

Developed and delivered by knowledge experts

- The collaborative approach taken when developing the Program with DeakinCo embraced evidence based learning and the latest educational practices
- Opportunity to customise the offering and adapt to employer needs
- Driving change requires formal approaches when providing new skills to graduates in support of organisational visions and working methods. Through a client engagement model, pain points and business growth needs are identified. The Program offering is then customised based on these requirements and aligned to Chartered competencies
- Enabling line managers to be actively involved in the graduate's learning via EngLearn

A structured way to develop graduates and future leaders

- Provides necessary work and life skills through course topics such as self-management, emotional judgement, communication and team work
- Provides support for line managers and mentors to drive knowledge sharing within organisations
- Customised reporting is available to track graduates' progress, ensuring transparency and visibility
- Assists engineers to think commercially, enabling them to provide simple, cost effective solutions to business needs
- Provides global industry exposure through case studies and webinars, delivering information on the engineering landscape

TOPICS & MODULES

Topics that will feature within the Program include:

- Performance Leadership
- Project Methodology
- Innovation and Risk
- Stakeholder Engagement
- Business Acumen

Technical modules include:

- Asset Management
- Risk Management
- Safety in Design
- Project Management Essentials
- Discipline specific technical content
